Rostering with OneRoster at Achieve3000

Achieve³⁰⁰⁰
Literacy™

Actively Learn™

Smarty Ants®

Achieve³⁰⁰⁰
Math™

What is OneRoster?

OneRoster is a set of standard class roster templates with one common web service. The OneRoster template can be used to deliver class roster information to any digital content platform or Learning Management System (LMS).

Why has Achieve3000 adopted OneRoster?

OneRoster gives districts an additional automated rostering method to consider when working with Achieve3000. Additionally, the district team will have complete control over their roster information and decides which applications receive which portions of the data.

What OneRoster formats does Achieve3000 support?

Achieve3000 supports OneRoster version 1.0 and 1.1 and can support .csv and .zip file uploads. Achieve3000 also supports the OneRoster API.

How Does it Work?

Achieve3000 Math and Actively Learn provide OnDemand rostering which allows teachers to select their courses and sections they will use with those programs. Achieve3000 Literacy and Smarty Ants provide complete nightly updated rosters.

Want to roster using OneRoster?

Please contact rostering@achieve3000.com and let us know. We will then provide you with additional implementation information.

Additional Questions?
